

Code Critique

by Team ASHH

Unused Code

Be sure to remove all unused code as it can confuse other programmers working with the codebase

- Unused private method `set_activity` in `activities_controller.rb`
- Unused route in `freeranges_controller.rb` (`show` is never linked to in the app so that route is not needed)
- Unused views created by scaffolding

Unimplemented Methods

- Empty methods in trip.rb
- Use TODO tags
 - Tells reader that they're unfinished
 - Reminds developer to eventually finish it
- Specifications for these methods are clear and concise.

Add More Validation

- In the trip model, description and destination should not be numbers
- Pictures URL should not be any string
- In the methods in trip.rb and friendship.rb, should check whether a user is signed in or not, before allowing the user to do anything.

Nitpicks

- Delete unused views, generated by scaffolding
- Indentation is not consistent, especially in users' views
- Delete commented code in trip.rb
