Teamwork plan

Each team member's tasks:
Yixin: trip(create/edit/delete a trip) and use profile(date range, places of interests, budget).
Yihua: users(register, login, logout), add friend through Facebook request.
Michael: Activities (create, vote, rank, add photos)
Faith: Views and Logistics

MVP implementation
For our minimal viable product, we would like to implement the following key abilities:
1. Creating user accounts and completing a profile of various travel preferences.
2. Adding friends (Friends are people that can view one's profile.
3. Creating Trips with a group of friends.

Yixin:
Users: could create/edit/view profile. For free dates, could only enter a start date and end date. Not yet do any checks for overlapping range. Only show range instead of a calendar.
Trip(create/edit a trip. Which part of trip is editable? Invite new friend, creator could update budget range. Place and date are probably not editable?)
Yihua: users could log in through Facebook and they could also log out. User could also send invitation to their Facebook friends, so that if the friend register through the link on Facebook, it becomes the friend with the user.
Michael: Create activities, vote on them, and display rankings for the trip. But users could not upload photos yet.
Faith: Create Logistics. These help users share good travel deals (hotel and flights). WIll mostly be working to make our app more user friendly.
